

IBM iSeries USERS! PUT THE POWER BACK IN YOUR OWN HANDS

As of 10/01/14, IBM no longer markets or distributes a platform using Intel chips and that is capable of running Windows. All IBM platforms are now based on IBM's RISC based "POWER" architecture.

Do you need a solution that is certified to run on IBM's new POWER 8 Platform? The time to focus on answering this question is NOW!!! ACT TODAY, so that you have time to implement, integrate and test the necessary changes before the 2015 holiday rush.

- Larger merchants today want to:
- Have freedom of choice in selecting a payment processor and payment card solution.
- Choose their platform, operating system, database server and programming language.
- Have access to detailed transaction data that resides on their systems, not in the cloud.
- Purchase their merchant account directly from a processor, not from a bank or third party.
- Negotiate their own processing fees independent of their software vendor.
- Have deployment options including in house, public and private cloud options.

CFXWorks' PaymentCardXpress™ payment card solution empowers merchants to be able to take more control over their processing. Bypassing third party processors improves security and lowers the risk of compromise, in addition to helping to lower the cost of achieving PCI compliance.

PaymentCardXpress™ - A credit and gift card solution that runs on and supports Windows, Linux, UNIX, and IBM POWER 7 or 8 platforms running AIX, Linux or IBM i. It uses WebSphere, Apache Tomcat or jBoss as the Java Application Server. It supports several database engines including DB2, Derby, MySQL and SQL Server.

Why PaymentCardXpress™?

- Work and negotiate directly with our preferred processing provider, Global Payments!
- A token based solution that can help reduce scope for PCI DSS.
- Encrypts transactions at the point of swipe and using dual firewall technology and tokenization provides the most secure processing environment possible for your customers.
- Compatible across many system types, database architectures, and deployment scenarios.
- Supports eCommerce, MOTO and Retail market segments.
- Virtual Terminal and Reporting Tool access available

A full function test version of this software is available at no cost to the merchant. CFXWorks will also install for you, if assistance is needed. When you are ready to run production transactions, only a production license key is required.

Many CFXWorks product guides are available to you today. For more information, please call CFXWorks at 678-455-0952 or send us an email at sales@cfxworks.com or support@cfxworks.com
